Claim(s) 1-2, 4-9, 13-14 are rejected under 35 U.S.C. § 112, first and/or second paragraphs, as the claimed invention is not described in such full, clear, concise and exact terms as to enable any person skilled in the art to make and use the same, and/or for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The term "high" is a relative term which renders the claim indefinite. It is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention.

Applicant's disclosure appears to intend circumferentially rather than "axially" offset.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim(s) 1, 4-5, 9-10, 13-14, to the extent they are definite are rejected under 35 U.S.C. § 102(e), as being anticipated by Stevens. The examiner finds all claimed subject matter to be present.

See Fig. 5.

Art Unit: 3682

Claims 3, ¹¹~~10~~-12, 15 are objected to for depending on rejected claims. They would be allowable if rewritten in independent form, including all parent claim limitations.
